NEW

EVOJACK 2.1

EvoJack is the hydraulic rally jack specifically designed for the equipment of the best rally cars.

Aluminum and steel made, EvoJack is extremely lightweight and easy-to-use. The support base is fully machined from a unique aluminum block in order to ensure stability; the adjustable lifting pin makes EvoJack suitable for every rally car.

In the new 2.1 version the total length and extension have been increased by 50 mm, while the lifting pin - now available also in the hexagonal shape - has been partially restrained to facilitate the insertion into the chassis. A safety system has been also installed to prevent the accidental removal of the release valve, avoiding undesired and annoying oil leaks.

EvoJack 2.1 is a reliable and professional product, and in a customized blue version is part of the original equipment of every Ford Fiesta by M-Sport, also those taking part in the WRC.
