EVOjackQUADRA

The hydraulic pantograph jack for rally

EVOjack Quadra is the fast hydraulic pantograph jack specifically designed for rally racing.

Made of **aeronautic aluminum alloy** and **high-strength steel**, the EVOjack Quadra can be used on any racing car, thanks to the jackscrew that fits easily into the chassis without the need for an insertion hole.

The **removable handle** allows to quickly lift the car and to turn the hydraulic release valve safely; the lifting arm is already inclined to the vertical in order to follow the natural movement of the car during the lifting phase, ensuring **extreme stability during wheel change** operations.

EVOjack Quadra is a tool intended exclusively for **racing use**, designed for advanced users but also suitable to beginners.

TECHNICAL FEATURES

Foot	Machined from a solid block of aeronautic aluminum alloy
Weight	5,10 kg
Lifting speed	24 strokes to maximum extension
Lifting weight	600 kg
Minimum height	16 cm
Maximum height	39,50 cm
Extension	23,5 cm
Total width when closed	39 cm

MATERIAL

- Aeronautic aluminum alloy AL6082

USE

- Rally
